ADMINISTRATION REPORT

OF

IRRIGATION WORKS IN THE BOMBAY PRESIDENCY FOR 1920-21.

I.—GENERAL.

A.—Details of Direct Expenditure.

In the year 1920-21 the direct expenditure (excluding collection charges) on all the Irrigation Works throughout the Presidency amounted to Rs. 111½ lakhs compared with Rs. 100¾ lakhs in the previous year, and Rs. 83¾ lakhs, the average of the last three years. The total is classified and divided between the Presidency proper and Sind as follows:—

	Deccan and Gujarát.	Sind.	Total.
	Rs.	Rs.	Rs.
Works ...	29,94,553	9,07,521	39,02,079
Repairs ...	5,15,060	37,47,324	42,62,384
Establishment ...	11,80,786	14,75,181	26,55,967
Tools and Plant ...	1,38,269	58,044	1,96,313
Refunds of Revenue ...	42,835	616	43,511
Gratuitous Relief ...	12,766	.....	12,766
Suspense Account ...	96,672	—10,029	86,643
Receipts on Capital Accounts ...	—4,736	.....	—4,736
Total ...	49,76,470	61,79,257	1,11,55,727

2. The distribution of the above expenditure under Major Heads of Accounts is given below:—

Heads.		Amount.	Remarks.
	Rs.	Rs.	
Capital Account—			
Major Works—			
Protective Works	...(a) 37,59,034		
Productive Works	...(b) 39,611		
		37,98,645	Imperial.
Minor Works and Navigation—			
Works for which Capital and Revenue Accounts are kept	... .	2,34,693	Half Imperial and half Provincial.
Revenue Account—			
Major Works—			
Protective Works	... 4,04,815		
Productive Works	... 24,35,566		
		28,40,381	Do.
Minor Works and Navigation—			
Works for which Capital and Revenue Accounts are kept	... 6,63,336		
Works for which only Revenue Accounts are kept ...	... 13,59,794		
		20,23,130	Do.
Works for which neither Capital nor Revenue Accounts are kept—			
Agricultural Works	... 20,67,644		Do.
Contribution Works	... 6,989		Deposit contribution.
		20,74,633	
Construction of Protective Works	.....	37,722	Imperial.
Famine Relief outlay on Irrigation Works ...	... ..	1,41,473	Three-fourths Imperial and one-fourth Provincial.
	Grand Total ...	1,11,55,727	

(a) Includes expenditure in England, Rs. 92,913.
(b) Do. do. Rs. 10.

B.—Figures for Capital Works only.

3. The receipts on Capital Irrigation Works alone compared with the year's expenditure show a profit of Rs. 5,91,275 in Sind and a loss of Rs. 23,45,443 in the Deccan and Gujarát :—

Class of works.		Direct Receipts.	Indirect Receipts.	Total Direct and Indirect Receipts.	Direct expenditure.		
					Capital	Working expenses (including the share of collection charges.)	Total.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Major Irrigation Works.	Deccan and Gujarát.	20,81,107	7,932	20,88,499	37,64,671	7,47,272	45,11,943
	Sind	1,94,755	17,99,170	19,93,926	39,611	22,87,568	23,27,179
Minor Irrigation Works for which Capital and Revenue Accounts are kept.	Deccan and Gujarát.	2,34,014	18,489	2,52,503	—208	1,74,710	1,74,502
	Sind	59,682	17,09,810	17,69,492	2,29,264	6,06,700	8,35,964
Total, Deccan and Gujarát ...		23,15,121	25,861	23,41,002	37,64,463	9,21,982	46,86,445
Total, Sind ...		2,54,437	34,99,980	37,54,418	2,68,875	28,94,268	31,63,143
Grand Total, Deccan and Gujarát and Sind 1920-21		25,69,559	35,25,861	60,95,420	40,33,338	38,16,250	78,49,588
Grand Total, average of last three years ...		18,40,066	43,81,320	62,21,386	30,24,750	27,87,499	58,12,249

4. The area under irrigation showed, on the whole, a decrease of 96,833 acres when compared with the average of the last triennium. These areas and estimated values of crops grown are contrasted in the following statement :—

Class of works.	Area.			Value.		
	1920-21.	Average of 3 years ending 1919-20.	Difference.	1920-21.	Average of 3 years ending 1919-20.	Difference.
	Acres.	Acres.	Acres.	Rs.	Rs.	Rs.
Major Works—						
Deccan and Gujarat ...	210,482	155,628	54,804	2,97,83,337	2,49,28,158	1,48,55,179
Sind	1,107,971	1,241,081	—1,33,110	2,84,02,688	4,40,88,264	—156,85,576
Total ...	1,318,403	1,396,709	—78,306	6,81,86,025	6,90,16,422	—330,397
Minor Works—						
Deccan and Gujarat ...	62,955	46,287	16,668	33,16,085	29,98,201	3,17,784

Total ...	985,816	1,004,343	—18,527	2,19,40,214	2,48,86,107	—29,45,893
Grand Total ...	2,304,219	2,401,052	—96,833	9,01,26,239	9,39,02,529	—37,76,290

C.—Figures for other than Capital Works.

5. These may be works for which only Revenue Accounts are kept, or works for which neither Capital nor Revenue Accounts are kept. The receipts on these works are principally in the form of a share of the Land Revenue and are termed "Indirect" and as such are book credits, so that figures of revenue appearing in the Finance Accounts, as distinguished from the Statistical Statements, accompanying the Irrigation Administration Report, are very small, being for direct revenue only, viz., proceeds from sale of water, etc. The area of irrigation on these very numerous works is always large

but it fluctuates to some extent with the seasons. The following statements give a comparison of this year's and the average of the last three years' figures :—

Class of works.	Revenue.			Expenditure.	Net Revenue.
	Direct.	Indirect.	Total.		
Minor Works—	Rs.	Rs.	Rs.	Rs.	Rs.
Works for which only Revenue Accounts are kept. Deccan and Gujarat	32,197	4,55,330	4,87,527	1,90,365	2,97,162
Works for which only Revenue Accounts are kept. Sind	56,623	20,93,700	21,55,323	13,40,562	8,14,761
Total for 1920-21 ...	88,820	25,54,030	26,42,850	15,30,927	11,11,923
Average total for triennium ending 1919-20 ...	89,048	26,91,845	27,80,893	12,71,772	15,08,821
Works for which neither Capital nor Revenue Accounts are kept. Deccan and Gujarat.	16,945	.....	16,945	75,916	—58,971
Works for which neither Capital nor Revenue Accounts are kept. Sind ...	13,348	9,36,165	9,49,513	20,78,487	—11,28,974
Total for 1920-21 ...	30,293	9,36,165	9,66,458	21,54,403	—11,87,945
Average total for triennium ending 1919-20...	31,049	9,37,640	9,68,689	16,53,640	—6,85,051
Grand Total for 1920-21 ...	1,19,113	34,90,195	36,09,308	36,85,330	—76,022

NOTE.—In this report whenever the average is referred to, it is the average of the last three years, unless otherwise defined.

Class of works.	Area.			Value.		
	1920-21.	Average of the triennium ending 1919-20.	Difference.	1920-21.	Average of the triennium ending 1919-20.	Difference.

D.—REVIEW OF IRRIGATION.

Description of Irrigation.

6. In Sind the rainfall is usually negligible and cultivation depends almost entirely on canal irrigation which in its turn is dependent on the inundation of the river Indus.

Inundation and rainfall in Sind.

7. The inundation of 1920 was on the whole unsatisfactory, as the river was low both in June and September. The rainfall was slight and did little good to cultivation.

Irrigation and rainfall in the Deccan and Gujarat.

8. In the Deccan and Gujarat cultivation depends mainly upon rainfall and the tanks and canals are useful for the purpose of growing the more valuable crops or to counteract, if necessary, the evil effects of a deficient rainfall. The irrigation schemes in this part of the country involve the construction of storage reservoirs and are costly in comparison with those in Sind. The rainfall of the year was not very favourable and consequently there was a keen demand for canal water.

Area irrigated and gross revenue.

9. The area irrigated in Sind during the year was a little over 3 million acres as against nearly 3½ million acres of the previous year and the gross revenue amounted to Rs. 68½ lakhs against Rs. 86¾ lakhs of the previous year.

10. The total area irrigated in the Deccan and Gujarat was about 431,000 acres against 4 lakhs of acres of the previous year and the gross revenue from all sources amounted to 28½ lakhs of rupees against 24¾ lakhs of the previous year.

II—SIND.

1.—NATURE OF INUNDATION AND RAINFALL.

Character of the Inundation.

11. The inundation of 1920 was on the whole unsatisfactory as the river was low both in June and September. The river began to rise in the beginning of June and continued to do so with slight fluctuations till it reached the level of 13 feet at Bukkur on 15th July 1920. This level and over was maintained for a period of 30 days as was the case in the years 1919 and 1917, the average period of the previous 3 years being 20 days only.

12. On the Kotri gauge the level of 17 feet was first registered on the 11th July. This level and over was maintained for 49 days against 81 days in 1919, 39 days in 1918, 73 days in 1917 and 64 days the average of the previous three years.

13. The highest readings for the year were 15 feet on the Bukkur gauge on the 4th August and 21·4 feet on the Kotri gauge on the 8th August as compared with 14·7 and 22·4 feet on the Bukkur and Kotri gauges respectively in 1919 and the recorded maximum readings on these two gauges of 17·9 feet and 23·8 feet respectively.

Rainfall.

14. The rainfall was slight and was therefore of little use to cultivation.

2.—INDUS RIGHT BANK DIVISION.

(i)—WORKS FOR WHICH CAPITAL AND REVENUE ACCOUNTS ARE KEPT.

Desert Canal.

15. The Desert Canal was opened on the 4th June and it ceased to flow in December. Owing to silt at the head of its feeder dhund there was but little water in the canal during June, while the river was low, but gradually the dhund scoured and in July and part of August, while the river was high, the canal obtained an excellent supply.

16. When the river fell in the last week of August, the dhund silted rapidly at the head, as it did in 1919, but fortunately the main river eroding towards the dhund cut through into it just in time about 4 miles above the Desert Canal head and 1 mile below Adiowah and enabled about 85 per cent. of the crops to be brought to maturity in spite of the sudden fall of the river in August. All branch canals did very well. The full supply gauge reading of 10 feet and over was obtained for 24 days and the designed discharge or more for 44 days.

17. The Adiowah was opened on the 2nd July with 2·3 feet on the gauge at the head and ceased to flow on the 12th September 1920. It is a high level canal. As stated in the last report, the designed full supply level and bed level, etc., along the whole canal were further lowered by 2 feet during the year.

18 In July and the first part of August the canal worked well, as was expected, but as soon as the river fell, it was hopeless as usual. This was however the first trial since its bed had been lowered.

19. The river has since cut into the dhund, which feeds both the Adio and Desert Canals, and the result will be known during the inundation of 1921. It is expected that it will do better under the new conditions on the dhund than it has done in the past 16 or 17 years.

Unharwah.

20. The Unharwah was opened on the 10th June with Bukkur reading 5·9 feet and ceased to flow on the 23rd September 1920. It commenced to flow with a satisfactory supply and though water was low in the river in June, it caused no trouble to zamindars. During July and the first half of August it worked excellently, but unfortunately the feeder dhund silting very rapidly at its head, as the river fell, the canal stopped flowing earlier than usual.

21. In the compartment in front of the Haibat loop bund the water was allowed to impound during the Abkalani and by means of a sluice, built just upstream of the head regulator, the water was let out of the compartment into the Unharwah after the river had fallen ; this helped the crops to a certain extent, and gave the Unharwah about one-third of its full supply for 15 days. To prevent water entering the compartment from flowing back into the river, the bank was extended during the year. The dhund was cleared during the working season and it is expected to do good to the canal during the Abkalani of 1921.

22. Owing to deficient supply due to heavy silt at the mouth of the feeder dhund the damage to the crops would have been great if during the year under report the area under rice crop had not been less than usual and the supply had not been supplemented from the dhund compartment referred to above. About 60 per cent. of the area sown matured.

23. The full supply of 10 feet and over was obtained for 37 days, but it drew full supply discharge or more for 45 days as the canal gets the latter even with less than 10 feet reading at the gauge.

24. The Begari Canal was opened on the 3rd June, and it ceased to flow on 19th October 1920. It worked well till 10th September when it silted at the head of the feeder channel from the river owing to the heading up at the 6th mile regulator to give water to the Choi Branch. The new head regulator is only 7 miles from the river and in order to give full supply to the Choi Branch, a gauge reading of 12 feet has to be maintained at the 6th mile of the Begari, as even with a gauge reading of 9 feet, the Choi Branch gets nothing; thus the Choi Branch is a source of anxiety to the supply of the Begari Canal, when the gauge reading at 6th mile is less than 10 feet or so. Begari Canal.

25. To give water to Choi, rotations were started in June, and again at the end of August. After this it was not feasible to head up at the 6th mile regulator again for the Choi Branch for fear of further silting up the head portion of the Begari.

26. Below the 6th mile of the Begari there are only 3 branch canals, the Sonewah, the Mirzawah and the Nurwah. All these branches worked well and their crops were mostly all saved.

27. About 75 per cent. of the irrigation on the Begari Canal is, however, from karias taking off direct from the main canal, and therefore it was impossible to give the benefit of rotations to such a system of irrigation. The consequence was that a large area (about 40 per cent.) failed to mature, or produced inferior crops.

28. The Begari tails into 2 canals called the Eden and Sirwah. These are silted very badly, as most of the land on them is lift.

29. For several years past there has been chronic deficiency in the tail of the Begari, the Eden and the Sir canals. To attempt to remedy this some silt was removed during the working season. But in the last 8 miles of the Edenwah, there was not a single acre of land cultivated and in the upper reaches much of the cultivation failed to mature.

30. The only important work carried out during the year was that of constructing the new Right Bank of the Begari canal. This work was found to be necessary, as, it was feared, that the 1896 loop, which was the first line of defence, would be eroded during the Abkalani of 1921 with the result that water would impound against the Ghouspur Loop and the old weak right bank of the Begari. The new right bank was therefore constructed between the old and the new head regulators. The work was completed in April 1921.

31. The Choi Branch worked well from July to the middle of August when it silted heavily, due probably to the erosion by the river just above the Begari head. The crops on the Choi suffered for want of one more rotation of 5 days. About 70 per cent. of the cultivated area produced an average crop. Most of the cultivation was juari and bajri.

32. The only work, which was carried out during the year was additions and alterations to the head sluice over distributary No. 1 (right) to convert it into an open type sluice. As long as it worked as a submerged sluice, and was provided with screw gates, the bottom silt laden water rushed in through the sluice with a high velocity causing heavy silt deposit in its course and consequent deficiency of water along the distributary. It was to remove this defect that the above work was undertaken and completed in September 1920.

33. The Mahiwah was opened on 4th June and ceased to flow on 25th September 1920. Mahiwah.

34. Owing to the change in the previous method of distribution the supply in the whole system was more than satisfactory from the very commencement of the season till about the third week of August. If the zamindars were more energetic and had taken advantage of the good supply in good time, there would have been no failure of kharif crops. But for one reason or another sowing was unusually late and this added to the failure of the kharif crops.

35. As the project for remodelling the Sehar Canal will not be remunerative, it will probably have to be abandoned. Sehar Canal.

36. The Sukkur Canal has two heads, one Rahuja head and the other the Old head. The Dhoro B, which feeds the Rahuja head of the Sukkur Canal, was deepened and widened during the last working season and the canal worked very satisfactorily. Had it not been for the silting up of the bye-river at its head just near the Rajib Canal, the Dhoro B would have continued to maintain a high level in spite of the sudden fall in the river. Dhoro B has worked satisfactorily and has not silted throughout its length; but on the contrary has scoured at some places. Sukkur Canal.

37. The Rahuja head was opened on the 22nd May 1920 and at the start worked quite satisfactorily. The gauge at Shikarpur road bridge (mile 3/7 of the Sukkur Canal) maintained its Full Supply Level of 17·0 feet and over for 39 days against 65 days last year. The maximum gauge reading was 18·3 on 20th August 1920, when the river began to fall with results which would have been serious, but for the timely opening of the Old head on the 2nd September, to supplement the supply. The Rahuja head stopped flowing on 1st November 1920 and the Old head was closed on 7th April 1921 in order to carry out necessary repairs and improvements.

38. The canal was widened from mile 20 to 22. The banks were improved and strengthened, and groynes and 'muharis' were constructed where necessary. Karias with 'kacha' heads were provided with pipes and masonry sluices and the first 3 rajwahs were converted into a distributary and a head regulator constructed over it.

39. The two branches Kur Khairo and Kur Biro worked satisfactorily, and there was no deficiency except at the tails, which was remedied to a certain extent, by resorting to rotations at the Ghangra regulator at mile 39/3 just below the heads of these branches. They started flowing on 2nd June and ceased on 29th and 23rd October 1920 respectively.

40. The awkward bend at mile 4 of Kur Khairo was removed and the banks and inspection paths were improved and kacha karia heads provided with pipes and masonry sluices.

41. The Ghar Canal was opened on 28th May 1920, which was the earliest date of flow possible on account of the low river. The gauge at head rose to 12·4 feet maximum on the 4th August as compared with 12·7 in 1919, which was a record reading. The Larkana gauge was allowed to go up to 16·5 feet, *i. e.*, 0·50 feet more than Full Supply Level. This level of 16·0 feet and above was maintained for 45 days. The canal worked satisfactorily and ceased to flow on 14th October 1920.

42. During the last working season, a beginning was made in the canalization of the Ghar dhund, which feeds the Ghar Canal, by narrowing its width where necessary by constructing a series of groynes which have acted well. It is proposed to continue this work and to excavate necessary training channels at a few places so as to keep the dhund working at 2·0 feet on Bukkur.

43. The Fordwah, which is a feeder to the Ghar Canal, was opened on the 10th June, but had to be kept partially closed up to 22nd August, so as not to let the Larkana gauge exceed 16·5 feet. After this it was fully opened on account of the fall in the river and ceased flowing on the 1st November 1920.

44. The Naurang and Nurwah into which the Ghar Canal bifurcates at its tail flowed on the 1st June 1920. The maximum reading at the gauge was 13·0 feet against 13·10 feet in 1919 which was the record reading during the last 10 years. The Full Supply Level of 12·0 feet and over was maintained for 43 days against 59 days last year. Both the canals worked satisfactorily and stopped flowing on 20th November and 1st December 1920 respectively. Nothing special was done to the Nurwah except the removal of a bend in mile 6 opposite karia Fatual and the reduction of two big karias the Nur Mahomed and Fatual.

45. Groynes were constructed in the Naurang where the canal section was excessive in order to bring it to a proper section, with satisfactory results. Stone pitching was done at the head, which protects the apex at the bifurcation from scour. The removal of bad bends at miles 2/0 and 3/6 have greatly improved the canal. The work of constructing head regulators over these canals has been postponed for some time till the fate of the Sukkur Barrage is decided.

46. The Nasrat *ex*-Ghar which takes off from the Ghar Dhund, was opened on the 4th June 1920, the earliest date of flow possible. The extension of the canal from its 22nd mile to Kurshah flowed this season for the first time, but owing to the banks not being completed, water did not flow to the tail, which was fed from Kurshah. Removing 'passis' and easing bends in the old portion must be done in order to improve the supply with a view to making it serve as a good feeder to the Kurshah. These improvements are being carried out and are to be completed by March 1922. The canal stopped flowing on 4th October 1920.

47. The Sattah canal takes off from Naro, which is fed from the Indus on the Left Bank. The old mouth passed through sandy Kacha and was often choked by drift sand. A new mouth has therefore been given to it through stiffer soil, with results which will be known after the inundation of 1921.

(ii) Works for which only Revenue Accounts are kept.

48. The principal canals under this head are the Sind, Western Nara, Pritchard Pinyari, Kalri and Baghar canals.

49. The Sind Canal was opened on 10th June 1920. Colonel Fife's channel worked very well. Owing to the low inundation, the water Supply was insufficient towards the end of the season. The wants of the zamindars were, however, met by allowing rotations whenever feasible.

50. A bad bend from mile 18 to 21 of the Sind Canal is being removed. The Raiswah is being extended so as to tail into Yasinwah Karia. Pipe outlets are also being constructed along this canal.

51. The zamindars in the expectation of getting as good water supply as in the previous year, largely increased their area under rice but the river falling early, these crops were a total failure, except on the Munghirwah.

52. The canal was opened on 15th May 1920 with Bukkur reading 5'5 feet; but only four feet of water was allowed in the canal for the first few days to avoid breaches in the Mehar Sub-division, the supply being gradually increased till the regulator was fully opened on the 26th May 1920. After this date the regulator was kept fully opened till 6th July 1920, when regulation had to be resorted to to prevent the, gauge reading exceeding 12'8. This reading was maintained from 6th July to 1st August and was then gradually increased to 13'6 feet on the 22nd idem. Western Nara.

53. The new Feeder to the Western Nara takes off the Kambrani dhund and joins the Nara at mile 33/1, *i. e.*, below the Dhamrao off-take. It was originally constructed to supplement the supply in the Western Nara to make up for the volume drawn off by the Dhamrao Branch. This feeder was opened on 18th June with a gauge reading of 9'1' at its head regulator, and it remained fully opened up to 22nd July. To avoid breaches the regulator was then partially closed up to 15th August after which date it again remained opened. The feeder finally ceased flowing on 2nd September when Bukkur read 6'3'.

54. There were complaints of deficiency on this feeder canal and endeavours were made to improve the conditions by allowing Khuadas to save withering crops, and the result justified the permission given. No leak or breach occurred during the whole Abkalani. The canal as a feeder to Western Nara is useless and gets heavily silted and there is very little velocity in it when flowing. It can best be utilized to supply the Dhamrao by syphoning it under the Nara and thus set free about 800 cusecs for the Western Nara.

55. The Pritchard Canal was opened on 25th May 1920 and was found to work well. Due to some favourable change in the river the head regulator gauge read only 1' less than the Bukkur gauge for the first time since the construction of the canal. On the date of oppening, Bukkur read 4'9' while the gauge at the head regulator read 3'1'. Pritchard Canal.

56. The regulator remained partially closed up to 18th August, the maximum gauge on the 6th August reaching 13'9' upstream and 9'7' downstream. Although the cut off was 4'2' against the difference of 6'9' of the year before, the gauge on the 7th August read 15'4'/8'5'. This partial closure was for a period of 51 days, and has, as usual, resulted in a silt deposit of 3' in depth. As there was no clear spill water to be admitted owing to the sudden fall of the river, the silt could not be satisfactorily scoured out and about 2' depth of silt still remained in the canal.

57. The canal ceased to flow on 5th November. It has been decided to construct a cross regulator at mile 9/6 of the canal. It will help to prevent the silt deposit, which results in deficiency at the end of the season, as it will allow of a greater volume of water being taken in for the use of lands in the first 10 miles and will also probably cause a better flow in the Pritchard, and less chance of silt accumulating in the head portion due to the closing of the Head Regulator. It will also help to save crops on the Youngwah at times of necessity by means of rotations. The F. S. L. will be maintained below this regulator as long as possible for the benefit of the Dadu and other talukas depending on it.

58. The Pinyari canal is 67 miles long and is the chief source of supply in the Pinyari and Shahbunder Sub-Divisions. It flowed on the 9th May 1920, with a gauge reading at head of 4'5.' The usual rotations at Durro and Shorewah regulators were resorted to in order to give water at a higher level to the upper reaches of the canal. It ceased to flow on 9th November 1920. Pinyari Canal.

59. The Karo Gungro escape channel was taken in hand this year to drain the low lands liable to be flooded. The Laikpur Canal was given a new head from Pinyari to supplement its supply. The Hyderwah and Ghari *ex* Mahmuda were widened during the year.

60. The Kahri canal takes off from the river on its right bank near Luka and runs south-west through the interior of Tatta taluka and tails into the Mirpur Sakro talukas. The canal started flowing on 14th June with 5'2' at head, and ceased to flow on 20th September 1920. Kahri Canal.

61. The Baghar canal is one of the deltaic mouths of the Indus, and takes off from the right bank near Agimani. It runs through Tatta and Mirpur Sakro talukas and tails into the sea through Sheikha creek. It began flowing on 10th May with 4'2' of water at the head and ceased to flow on 6th November 1920. Baghar Canal.

Works in progress or completed.

62. The following are the principal works, under the head "works for which only revenue accounts are kept," which were in progress or carried out during the year under report :—

WORKS IN PROGRESS.

		Expenditure during 1920-21.
	Karachi Canals District.	Rs.
1.	Constructing Head Regulator over Ghar Marho ...	7,698
2.	Excavating escape channel from Kuro Gungro ...	20,404
3.	New mouth to Chorewah	13,289
	Western Nara District.	
4.	Constructing Office block to Public Works Department Bungalow at Khaderi	4,021
5.	Raising and strengthening the bank of Dhoro B feeding new Akil Mouth to Western Nara	4,388
	Shikarpur Canals District.	
6.	Extension of the Raiswah	3,878
7.	Constructing an open type regulator on Sind Canal in taki 943 below head of Munghirwah	3,528

WORKS COMPLETED.

	Karachi Canals District.	
8.	Reconstructing Head Regulator over Mirzo Canal	10,858
	Western Nara District.	
9.	Reconstructing Public Works Department Bungalow, Class II, at Bahawalpur	8,441
	Shikarpur Canals District.	
10.	Converting a road bridge in mile 29/0 of the Sind Canal into a regulator	10,713
11.	Constructing a compound wall round the Public Works Inspection Bungalow at Shikarpur	2,070

3.—INDUS LEFT BANK DIVISION.

(i) WORKS FOR WHICH CAPITAL AND REVENUE ACCOUNTS ARE KEPT.

63. The canals in the Left Bank Division fall under two groups, *viz.*, (*a*) the Eastern Nara System and (*b*) Canals taking off direct from the Indus.

64. Under (*a*) are the Nara River, the Jamrao, Mithrao, Khipro, Thar and Hiral Canals all of which, except the Khipro Canal, which flows during the inundation only, are perennial. The Thar Canal, though classed as perennial, is closed on or about the 1st December each year to save the land under command from being water-logged.

65. Under (*b*) are the Dad, Nasrat, Fuleli, Hasanali and a large number of smaller canals which are all classed as inundation canals though the Fuleli receives a fair rabi supply.

(a) The Eastern Nara System.

Nara Supply Channel.

66. The Nara Supply Channel is an artificial cut, 12 miles in length, taking off the Indus on its left bank above Rohri and forming the mouth of the Nara, an ancient course of the Indus. Its discharging capacity is about 20,000 cusecs during high inundation. The Nara River below the channel has no regular banks and the result is, that when the discharge in the channel exceeds 5,000 cusecs, the water overtops the banks and touches the Flood Diversion Bund on the east and the hills on the west.

67. Owing to the construction of the Flood Diversion Bund the Ghotki floods now enter the Nara River below the 34th mile instead of the 12th mile before the construction of the bund. On the left bank of the Indus above the mouth of the Nara supply channel there was such a heavy deposit of silt as to form a large *kacha*. During August 1920 the set of the river changed towards the left bank and eroded the *kacha* from the Nara

Supply Channel mouth to about 3 miles above it. This erosion so heavily silted the supply channel that in certain miles the deposit in the channel measured from 6 to 8 feet in depth with the result that there was no water for rabi in the Jamrao and Mithrao Canals. As the discharge in the channel in December 1920 became less than 100 cusecs, it was closed in January 1921 and silt was removed in a width of about 70 feet in the first 28½ miles for ensuring a fair supply in the early part of the Kharif season of 1921 to the cotton and rice on the Jamrao and other canals depending on it. With a view to preventing silt from being deposited in May and June 1921 on account of erosion due to the rising river, the left bank of the channel was extended by about 1,500 feet. The total cost of the two works was about 2 lakhs of rupees. Owing to the sudden drop in the discharge in September caused partly by the fall in the river and partly by silting of the channel, the kharif crops on the canals fed by it did not receive water in sufficient quantity to bring all to maturity.

68. The head regulator remained fully opened during the whole abkalani season of 1920. The maximum water level during the year recorded on the gauge at Head Regulator was 22·7′ upstream and 22·4′ downstream on the 3rd August 1920, and the highest water level attained at the 12th mile gauge was 27·4′ on the same date.

69. The high velocity in the channel causes scouring of the sides and thus widens the section. To prevent this and to bring the channel to a regular and defined section stone groynes were constructed and the sides protected with stone pitching at a cost of about Rs. 6,000.

70. The length of the Nara from the end of the Nara Supply Channel to the Jamrao head works is about 96 miles and from the Jamrao to the That Weir about 100 miles. It commands over 500,000 acres of cultivable land. The area cultivated during the year on the Nara in the Eastern Nara District was about 47,000 acres against 64,483 acres in 1919-20, and 42,512 acres the average of the previous three years. The Nara.

71. The Nara bed is in fairly good condition from Chotiari right down to Farsh. Above Chotiari at Bakar there are bad bends which have been improved by the construction of groynes and in this portion there is also a lot of silt. The supply in recent years has been low and a portion of the limited discharge passing below Makhi Regulator was being lost in the berms and depressions. With the extension and raising and strengthening of the inner bunds it is hoped that the wastage will be minimised. The Makhi Dhand forms a reservoir for the storage of water for rabi cultivation on the Mithrao canal. The river rose very late and the Mooral and Bagdad Sang sluices which fill the Dhand were opened on the 8th of August 1920, but owing to the sudden and early fall of the river they had to be closed on the 3rd September 1920. The small quantity of water that could thus be stored in the dhand was utilised to supplement the supply to the Mithrao from the Nara at the end of the kharif season.

72. The capital expenditure on this canal during the year amounted to Rs. 25,311 and was incurred mainly on (1) Constructing a bund above the 3rd span of the Jamrao Weir, (2) Closing a space of 3½ feet above the undersluice gates, (3) Constructing a regulator at 73rd mile of the canal, (4) Constructing a second regulator for the Jam Sahib Minor, (5) Extension of Potho Minor and (6) Constructing Digri Distributary *ex* 12th mile Digri Minor. The canal and its minors were maintained in good order throughout the year. The method introduced in 1919 of keeping the velocity in the approach channel at the head works less than that in the canal was again followed this year but the approach channel silting up the canal was closed from 27th August 1920 to 9th August 1920 and the undersluices completely opened, with, however, not very satisfactory results. The closing of a space of 3½ feet above the undersluice gates was very useful in keeping down the velocity in the approach channel but the closing of the 3rd span did not help scouring of the channel to any appreciable extent. Unless regulating gates are provided on the weir it will not be possible to obtain the high velocity in the approach channel necessary to scour the silt deposit and a project for this is under consideration. Jamrao Canal

73. The maximum and minimum discharges measured above the weir were 11,764 cusecs on 13th August 1920 and 52 cusecs on 26th March 1921 respectively.

74. The area cultivated during the year was about 185,200 acres as compared with 284,159 acres last year and 253,991 acres, the average of the previous three years. The area under cotton was about 116,900 as compared with 127,870 acres in the last year and 117,737 acres the average of the previous triennium. The river was late in rising and fell to an abnormally low level by the end of September. The discharge of the Nara at Rohri fell down from 3,530 cusecs on 15th September 1920 to 537 cusecs on 14th October 1920 and consequently the discharge at the Jamrao head decreased from 3,522 to 1,350 cusecs on the corresponding dates. In the beginning of October the Jamrao was closed for 10 days to give water to the canals in the Eastern Nara District and this rotation had to be continued right up to the end of the season. The decrease in

cultivation was due to the failure of water supply in the Jamrao caused partly by the silting of the Nara and partly by the low river. There was practically no rabi and the zamindars were warned in due time not to rely on any rabi supply.

75. An allotment of new land to the extent of about 8,377 acres was made during the year on this canal.

76. This is a perennial canal taking off the Nara above Makhi regulator. The Makhi Distributaries having come into operation no supply was drawn direct as hitherto from the left bank of the main canal in the first nine miles and the F. S. L. of 9·5 feet was obtained at Kanhar with 11 feet below Bakhora. The Makhi Left Distributary and Chotiari Minor worked well, but the Makhi Right Bank Distributary could not be thoroughly tested as several zamindari karias had not been excavated.

77. The full supply at the 30th mile could only be maintained on rotation days. Deficiency was therefore felt on the 30th Mile Left Bank Distributary, Doso and Hingorno and in karias taking off the main canal. Profiles were constructed on some karias *viz* Dosowah and several of them worked well. Deficiency was also felt at the 45th and 61st mile regulators but the tail from mile 65 to 93 suffered the most on account of the low inundation.

78. The capital expenditure on this canal during the year amounted to Rs. 14,951 and was incurred on constructing the two Makhi Distributaries.

79. The area cultivated during the year under report was about 90,200 acres as compared with 108,600 acres of the last year and 110,317 acres the average of the previous 3 years. The decrease in area was due to the silting of the Nara Channel and consequent failure of the rabi supply.

80. This canal was opened on 1st May 1920 and worked well, rotations being resorted to with a view to ensure proper distribution of water. Rice cultivation temporarily allowed in the Hiral tract continued during the year.

81. The cultivation during the year was about 13,700 acres as compared with 16,868 acres in the last year and 13,093 acres the average of the previous three years.

82 The capital expenditure of the year amounted to Rs. 1,861 only and was incurred on constructing the Head Distributary Hiral.

83. An allotment of about 1,966 acres of new land was made on this canal during the year under report.

84. This canal was opened on 8th June 1920. For the proper distribution of water rotations had to be resorted to at all regulators.

85. The cultivation during the year was about 41,000 acres against 51,738 acres in the last year and 52,729 acres the average of the previous three years.

86. The 3rd Mile Right and 7th Mile Left Bank Distributaries constructed last year on the whole proved a success though there was deficiency in the tail karias to feed which temporary openings had to be allowed from the main canal.

87. The capital expenditure of the year amounted to Rs. 1,323 and was incurred on completing 3rd and 7th Mile Distributaries.

88. The Khipro Canal was opened on the 1st August and ceased flowing on the 19th September 1920 and all cultivation therefore failed.

89. The cultivation during the year on this canal was about 2,200 acres against 2,558 acres in the last year and 2,605 acres the average of the previous triennium.

(b) Canals taking off direct from the Indus.

90. The canal was opened on 4th June. It received Full Supply for 29 days and was closed on 5th October. Except for one month during the height of the inundation the supply was, as usual, rotated and a large proportion of the crops matured in spite of the sudden drop in level at the end of the season. The upper regulators feeding the Kandiaro and Naushahro talukas were kept continuously closed right upto the end of the season with very satisfactory results.

91. The screw gates installed last season were extremely useful in effecting karia rotations efficiently and quickly and it is satisfactory to note that in spite of the bad season, the tail of the canal got a fairly good supply.

92. The new head to the Madadwah was excavated and opened and the work of excavating the Lundo Branch was in progress. This work when completed will afford a comparatively assured supply to about 20,000 acres, convert much of the present lift area into flow and bring under cultivation an appreciable area of waste land.

93. During the year the existing canal telegraph system along the main Nasrat Canal was extended to Kandiaro, Bandhi and Dour.

94. The cultivation during the year on this canal was about 81,500 acres against 60,235 acres in the last year and 68,798 acres the average cultivation of the three previous years.

95. The total expenditure on the construction of karias and kasis up to the end of the year on the canal amounted to about Rs. 2,89,000.

96. An allotment of about 16 acres was made on this canal during the year under report.

97. The canal was opened on the 3rd of June and had a continuously good supply up to 28th August. It was closed on 23rd October. The usual flooding at the tail of the canal was stopped this year by the extension of bed groynes to the 72nd mile which also improved the supply in the upper reaches. Dad Canal.

98. During the year the banks of the canal between miles 50 and 56, where they were low, were raised and the construction begun of a Head Regulator to the Mubarak Branch, taking off at 56th mile, to enable a still higher level of water being let down below the 50th mile Regulator in the interests of the reclaimed lands at the tail.

99. The cultivation during the year on this canal was about 90,600 acres against 81,500 acreas in the last year and 89,015 acres the average of the three previous years.

100. The total expenditure on the construction of karias and kasis to the end of the year under report amounted to Rs. 1,32,600.

101. New land to the extent of about 31 acres was allotted during the year.

102. The Ren Distributary which takes off from the Dad canal suffered somewhat on account of rotation being resorted to on Dadwah during September but the situation was met by internal rotations, as far as possible. New land to the extent of about 2,907 acres was allotted during the year on this distributary.

103. The canal worked very satisfactorily during the year under report. The Jamshora head was stable and no silting occurred. Rotations were started at Alipur Regulator from the 23rd of June, but owing to the steady rise of the river in July it was possible to keep the maximum safe gauge reading on the downstream side of this regulator. Fuleli Canal.

104. The Old Fuleli worked so well, on account of the extension of groynes which reduced its width and scoured the silt in the bed, that a much higher discharge entered the New Fuleli from this canal and in July it was necessary to cut off water at the Jamshora head from 16' to 16'—6" as a greater supply could not be admitted in the Badin Sub-division. This is very satisfactory and when the proposed regulator is built at the 72nd mile of the Fuleli, it will be possible to utilize this surplus water in the Tando Bago Sub-division where there is a very large area of land suitable for dry crops.

105. The training work in the 60th mile of the main canal was most successful in preventing the heavy silting which formerly took place every year in the Manikwah early in the season reducing its discharge to a hopelessly inadequate figure. This year the water flowed in the tail of Manikwah to a point never reached before without the assistance of rain water.

106. The area cultivated during the year was about 410,000 acres against 380,000 acres in the last year and 429,000 acres the average of the previous three years.

107. The capital expenditure on this canal during the year under report was about Rs. 98,926 and was incurred on Stoney gates purchased for the new Fuleli Head Regulator at Jamshora.

108. The main canal worked very well and the groynes which were constructed in the head reaches kept the main canal free from silt. This was of the utmost importance this year as although the river fell early in August water flowed in the canal in September and a large area of crops was saved. In the lower reaches the construction of sluices on the Sherwah resulted in a much improved supply at the tail, and with the annual improvements that are being carried out it is hoped that the area under cultivation will reach the figure anticipated in the project. Hasanali Canal.

109. This year sluices have been constructed on karias taking off direct from the Hasanali in order to control and regulate the supply of water.

110. The expenditure on this canal during the year under report was Rs. 4,400 under "Extensions and Improvements" and was incurred on the construction of a sluice *ex*: Sherwah and reducing karia sluices *ex*: Hasanaliwah.

111. The area cultivated during the year was about 19,000 acres against 20,000 acres cultivated in the last year and 18,985 acres the average of the three previous years.

Canals in the Hyderabad Canals District.

112. All the canals in this district worked satisfactorily. Although the river has receded and the former river bed has become a big 'dhand' at the head of the Great Marak Canal, from which the canal now gets its supply instead of directly from the river as in the past, the canal worked very satisfactorily. The head regulator on this canal which was under construction was completed during the year at a total cost of Rs. 1,59,150. The head of Sarfraz Canal which was groyned last year worked very satisfactorily and the canal flowed until the river fell to 4·5 feet on the Bukkur gauge, whereas in 1919 it stopped flowing when the Bukkur gauge read 6·3 feet. The work of constructing a head regulator to the Alibahar Kacheri canal was also in progress, the expenditure on it during the year under report being Rs. 27,466.

113. The cultivation in the whole of the Hyderabad Canals District for the year was about 242,300 acres against 262,500 acres in the last year and 268,666 acres the average of the past three years.

(*ii*) Works for which only Revenue Accounts are kept.

114. The principal canals under this head are Naulakhi, Mehrab and Dambhro in the Nasrat Canals District and Ren, Gharo Mahmudo, Kari Shumali and Nasir in the Hyderabad Canals District. The supply was fairly good in all these canals with the exception of Gharo Mahmudo which is fed by a dhand which on account of erosion of the river at its head, did not flow until Bukkur read 9 feet.

4.—PROTECTIVE EMBANKMENTS.

Kashmir Bund.

115. The maximum gauge reading was 15·0' (August 4th) compared with 14·7' of 1919. During July, the old front bund was eroded away opposite the 1896 loop as was expected, and there was every probability of the 1896 loop also being taken away, as it was approached by the main current of the river, but fortunately the erosion kept up only for a few days. When, however, the river was eroding rapidly towards the 1896 loop, it was decided to take precautions in case the Ghouspur Loop was brought into action. With this object in view water was pumped into the trenches in its whole length, but the wetting was not thorough, for it is impossible to wet the bunds thoroughly by this small trench method.

116. The maximum depth of water against the whole bund line was at mile 4/0 of 1896 loop when the maximum gauge reading was 8·2'.

117. There were no breaches in any of the river bunds in the Begari Canals District during the year.

118. The principal works carried out during the year were (1) Strengthening and trenching the 1896 loop and (2) improving the trenching of the Ghouspur Loop.

119. The front bund having been eroded in July 1920, the 1896 loop became the first line of defence. It was therefore very necessary to strengthen and trench the 1896 loop. This work was commenced in the previous year and completed during the year under report.

120. There were no indications that the river would change its course and not erode the 1896 loop. The Ghouspur Loop, which is the next bund behind the 1896 loop was therefore proposed to be trenched on the Haibut loop system to enable it to be thoroughly wetted and take the maximum high flood level. The work was commenced in November 1920, and has since been completed.

121. All the bunds in the Shikarpur Canals District withstood the floods that came against them.

122. The Kasimpur Bund has been abandoned and handed over to the Revenue Department.

123. The river being far away from the bunds in the Ghar Canals District it gave no trouble except to the Mitho Lulu Bund lower down Fordwah. The maximum reading against this bund was 15·4' on the 1st August with Bukkur 14·7'. This caused anxiety, and precautions had to be taken to watch the bund carefully. There was no breach, however.

124. The length of the river bunds in the Western Nara District is 101 miles. During the year the water touched the bund in many places and there was great pressure of water against the portion between miles 4½ to 45. A few leaks occurred through the bund, all of which were promptly detected and closed.

125. All the bund lines in the Karachi Canals District have been raised to 4 feet above maximum flood and brought to the standard section except a few portions of secondary importance which will be completed during 1921-22.

126. The Ghar Marho emergency loop completed last year was thoroughly wetted and stood well. This small loop was made because the retired Thahimani Gulel loop

could not be completed before the Abkalani and proved extremely useful, as the front bund was eroded by the river and spill was checked by this loop.

127. The Kot-Almo Loop in miles 19-20 of Mulchand Shahbunder bund commenced last year was completed this year. The bunds on the whole were not subjected to a great pressure during the year, as the river was not very high.

128. In the Nasrat Canals District, the Naulakhi Bhorti Bund has been extended right up to the Dad Canal. The total mileage of bunds in this District is 14 miles and they all stood the water pressure well. The spill water near Dambhro did not spread this year below the Tharushah Mithiani Road, as some of it found its way into the Dad and Dambhro Canals, and the remainder was held up by private zamindari bunds. The effects of this on the Dambhro system was very serious. The tract round about Doulatpur was flooded as usual, and the left bank of Suhaganwah which was raised last year was again overtopped.

129. The Ren Bund was touched by the flood water and the wetting was done by the beldar establishment.

130. The Jamshora front bund and Hajipur Bund which were damaged by wave wash were protected by stone pitching and brushwood groynes at places which were dangerously affected. The stone groynes or spurs constructed in the river at right angles to the Gidu Bund were successful in their object and the main current which was eroding the Gidu Bund was deflected with the result that silt deposited where formerly there was rapid erosion.

131. Erosion was very active at mile 1/4 to 1/7 of Ghallian Bund and therefore a new loop, two miles in length, was constructed behind it from the Old Fuleli bank to the Chandan bank.

5.—INDUS RIVER COMMISSION.

132. The expenditure on works and surveys was as usual charged to "43—Irrigation Minor Works and Navigation—Agricultural Works—Works for which neither Capital nor Revenue Accounts are kept." Indus River Commission—Works and their classification.

133. The total length of the traverse survey done during the year was 1,172 miles, against 2,073 miles done last year. The difference is due to the new method introduced of surveying the river from one permanent point to another permanent point with one traverse and closing the circuit between those points with the calculations already made in the previous year. Besides this, the work of demarcating District boundaries from Laki to Amri and from Laki to Sehwan was also in progress. The total length of the river course from Rohan in the Punjab to the point of its bifurcation was 532 miles. The whole of this length together with about 25 miles of the Haidri river and 5 miles of Ochito below the bifurcation point were surveyed and plotted. Surveys of the Indus.

134. The Khairpur boundary rails from Akil to Chakra village, 42 in number, were inspected this year and some dharries were fixed. Khairpur Boundary Rails.

135. Gauge readings of the river were taken daily at 11 stations, twice a week at 4 stations and weekly at 6 stations. The maintenance of all these gauges is necessary for the purpose of fixing the high flood levels for the river embankments, for recording the changes in, and level of supply at, canal mouths and for observing any permanent changes in the level of the river. River gauges.

136. Discharge and other special observations were continued at Sukkur and Kotri as usual. The results will be published in the Indus River Commission Records. The total monthly discharge at Sukkur during the inundation season and the minimum, maximum and average discharges of the year, compared with the results of the previous four years, are as follows:— Scientific works and discharges of the Indus.

Month.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
	Cusecs.	Cusecs.	Cusecs.	Cusecs.	Cusecs.
June	8,038,000	7,383,000	13,267,000	8,850,000	6,452,000
July	13,044,000	8,603,000	9,809,000	12,186,000	15,422,000
August	18,227,000	16,941,000	9,994,000	14,082,000	14,506,000

Minimum discharge observed throughout the year ... ... Cusecs...	17,568	28,068	21,784	31,017	29,582

Extensions and improvements, and special repairs.

137. The estimated cost of works under these heads sanctioned or approved during 1920-21 by the Indus River Commission for execution by the Executive Engineers and by the Commission was as follows :—

District.	Extensions and Improvements.	Special repairs.	Total.
A—Indus Right Bank Division.	Rs.	Rs.	Rs.
Begari Canals	1,73,553	1,12,479	2,86,032
Ghar Canals	13,355	.....	13,355
Western Nara	5,311	.....	5,311
Karachi Canals	2,37,983	39,868	2,77,851
Total ...	4,30,202	1,52,347	5,82,549
B—Indus Left Bank Division.			
Nasrat Canals	3,767	.....	3,767
Puleli Canals	18,015	51,316	69,331
Total ...	21,782	51,316	73,098
C—Indus River Commission.			
Works under the direct control of the Indus River Commission	19,246	.....	19,246
Grand Total ...	4,71,230	2,03,663	6,74,893

Maintenance and repairs.

138. The total expenditure under this head on the several works under the direct control of the Indus River Commission was Rs. 24,060.

139. No clearance work at the mouths of the Canals was carried out, as no dredger was available for the purpose. No snagging work also was done.

Total expenditure.

140. The total expenditure incurred and accounted for by the Indus River Commission was :—

	Rs.
Works	9,425
Repairs	24,084
Establishment	1,09,701
Tools and Plant	9,264
Total ...	1,52,474

Erosion.

141. There was heavy erosion near Sukkur Begari Bund, miles 27/4 to 28/7, from 10th October 1919 to 14th August 1920, the maximum rate of erosion during this period being 355 feet per week. The distance between the river and the bund which remained uneroded on 14th August 1920 was 1440 feet. A loop was proposed in January 1920 and completed in August 1920, behind this threatened portion of the bund.

142. Erosion took place opposite Belo Loop at mile 3/7, the maximum rate of erosion being 76 feet per week. The distance between the river and the bund which remained uneroded on 20th November 1920 was 3,353 feet.

143. There was erosion opposite Mulchand Shah-Bunder Bund at mile 18/5 from 5th May 1920 to 4th December 1920, the maximum rate of erosion being 60 feet per week. The distance between the river and the bund which remained uneroded was only 412 feet, therefore a new loop called the Kot Almo Loop was constructed behind miles 18/5 to 20/0 of the bund.

144. There was erosion opposite Baghar Uchito Bund, mile 5/4 to 6/3, from 19th June 1920 to 23rd October 1920, the maximum rate of erosion being 252 feet per week. The whole bund opposite mile 5/7 to 6/1 was washed away and the river water came up to the Emergency Loop; the Thahimani Gulel Loop was therefore constructed from mile 4/3 to 9/0 of Baghar Uchito Bund.

Sukkur Barrage project.

145. The Sukkur Barrage Canals Project described in the last report was submitted by the Government of India to the Secretary of State in December 1920. The final orders of the Secretary of State are awaited.

146. The Sukkur Barrage Project Executive district which had been in existence for the preparation of the project was finally closed down on 28th February 1921.

147. A Division in charge of a Superintending Engineer, known as the "Sukkur Barrage Division" was formed on 1st February 1921. This division will work up all details necessary for preliminary work in connection with the Barrage and Canals. The

chief work to be carried out immediately is the close contouring of the whole tract commanded by the projected Barrage Canals. Owing to the division being constituted late in the season, only a small amount of out-door work was possible before the close of the year. A small portion of the area between Sukkur and Ruk was surveyed for close contouring purposes and longitudinal and cross-sections for the head portions of the North-Western Perennial, Central Rice and South Eastern Canals was undertaken. Information was also collected for the purpose of acquisition of lands required for the proposed canals.

148. Observations for water levels, and cross-sections of the Indus at the site proposed for the Barrage were continued throughout the year under report as also observations of the Nara Supply Channel.

6—Miscellaneous.

Surveys, etc.

149. *Bench Marks.* In the Ghar Canals District, the Survey of India Department had run a line of precise levels following the old bench marks as far as possible. The route followed was from Bench Mark No. 184 near Gaibidero *via* bench mark No. 171 to the junction of the line No. 153 and thence to Sojra G. T. S. tower Station Bench Mark No. 2. From Sojra G. T. S. tower Station Bench Mark No. 2 to Lakha 35 35 G. T. S. tower Station Bench Mark No. 1 the line followed the old route, and from Lakha 35 to Nasirabad it followed the road from Kambar to Mehar.

150. The following bench marks have been constructed:—

(1) At the junction of level line with line No. 53.
(2) One mile east of Bhando Buldi.
(3) At Kambar Village.
(4) At Thariri Hashim.
(5) At Nasirabad.

151. In the Western Nara District the bench marks at the following places were constructed:—

(1) In the compound of the Inspection Bungalow at Khairpur Nathenshah.
(2) At Kolachi village on the Southern Bank of the Western Nara.
(3) In the compound of the P. W. D. Bungalow at Mehar.
(4) At Phulji.
(5) At Kurla village.
(6) Inspection Bungalow at Shah Hassan.
(7) At Chinni.
(8) Junction of Chinni-Johi Road with old level line 53.
(9) In the compound of the Police Lines at Johi.
(10) At Drigh.

152. No work in connection with the levelling operations was done by the Survey Department in the Left Bank Division.

Plantations.

153. Existing plantations on canals and bunds in the Left Bank Division were well cared for. New trees were also planted in all the districts and are thriving well.

Irrigation of cotton.

154. No Egyptian cotton was sown in this Division during the year. The following table shows some details regarding waterings given to indigenous cotton.

District.	Lift lands.		Flow lands.		Date of last watering.
	Number of waterings.	Intervals between.	Number of waterings.	Intervals between.	
Hyderabad Canals District ...	8 to 11 ...	.....	.....	.....	Between 9th September 1920 and 18th October 1920.
Eastern Nara District ...	.....	.....	4 ...	.....	Between 15th August 1920 and 23rd September 1920.
Fuleli Canals District ...	4 to 8 ...	10 and 27 days.	.....	.....	Between 12th August 1920 and 6th October 1920.
Northern District, Jamrao Canal.	6 to 12 ...	.....	6 to 10 ...	.....	Between 18th September 1920 and 14th November 1920.
Southern District, Jamrao Canal.	6 to 9 ...	.....	6 to 8 ...	.....	Between 2nd October 1920 and 9th October 1920.

III — DECCAN AND GUJARAT.

1. Northern Division.

General Remarks.

155. The rainfall during the year was about normal in the Ahmedabad and Kaira Collectorates, while it was deficient in the Panch Mahals. The monsoon commenced early from 15th May and ended by the end of August. The rainfall was plentiful and continuous between June and July, but the September rain failed and the demand for water was so great that a conference of the District Officers had to be held by the Commissioner, Northern Division, and a rotation under Police patrol had to be resorted to.

(i) First Class Irrigation Works.

Hathmati and Khari Cut Canals

156. The rainfall gauged at Ahmedabad and Prantij during 1920-1921 was 23·88 and 31·13 inches against an average of 29·61 and 30·74 inches respectively for the last 30 years including the year under report. The monsoon made its appearance early in the middle of May and lasted nearly up to end of July. The rainfall was light in May and plentiful and continuous in the months of June and July. In August there were only drizzles at intervals. Advantage was taken of the early rains and the reservoirs and tanks on the Khari Cut and Khari Sluices were filled by the 11th July 1921. The rain was well distributed during June and July and the Hathmati weir overflowed. About 350 cusecs of water were passed down the Hathmati Canal every day of which 100 cusecs (including 20 cusecs for leakage and absorption) were used in the Hathmati Canal irrigating 2,360 acres of kharif. The remaining 250 cusecs were passed down into the Khari, half by way of the Bhujwa Channel and half by way of the Bokh for nearly a month, up to 10th August, when the level in the Bokh having fallen below its F.S.L., the flow of water through the Bokh was stopped.

157. In the area served by the Khari Cut Canal the rainfall, though about normal, was not well distributed being confined to the early period of June and July after which there was no rain except drizzles in August. People were notified to transplant rice as early as possible and canal water was given to them for the purpose. For want of labour and seedlings, the work was, however, delayed. Due to the failure of rain in August and September, there was not sufficient water available for irrigating the crops which suffered in consequence. The area irrigated on the canal during the kharif season was 8,970 acres of which 562 acres were in the Kaira District. The rabi irrigation was 444 acres and hot weather 82 acres.

158. The total area irrigated and the gross assessed revenue on the Hathmati and Khari Cut Canals during the year were about 14,300 acres and Rs. 41,200 respectively against 11,000 acres and Rs. 57,700 the averages for the previous triennium.

Tanks in the Kaira Collectorate.

159. The area irrigated and the gross assessment on the Wangroli, Tranza-Nagrama, Savli and Saiat tanks compare with the averages for the previous triennium as shown below :—

Name of Tank.	1920-1921.		Average of the previous three years.	
	Area irrigated.	Gross assessed revenue.	Area irrigated.	Gross assessed revenue.
	Acres.	Rs.	Acres	Rs.
Wangroli	1,616	7,234	704	2,976
Tranza-Nagrama	.....	807	10	417
Savli	753	2,678	809	3,165
Saiat	71	866	305	1,615

The Wangroli, Savli and Saiat tanks filled partially whereas the Tranza-Nagrama tank was empty. The water in the former was utilised in irrigating kharif and rabi crops mainly rice, wheat and gram.

160. All these tanks were maintained in good condition at a cost of Rs. 12,528. The works of special repairs to Savli tank and constructing masonry works and outlets on the canals of Wangroli tank were in progress, the expenditure thereon being Rs. 937 and Rs. 1,495 respectively during the year.

Futelao Tank.

161. The Futelao tank at Nani Kharaj in the Dohad taluka, got very little replenishment during the monsoon and though it had about 2·32 M. cft. of water in it, only one acre of land was irrigated, there being no rice cultivation on the canals. The

yield from cultivation in bed was Rs. 213, against Rs. 140 during the previous year. The tank was maintained in good order at a cost of Rs. 1,000.

(ii) WORKS FOR WHICH ONLY REVENUE ACCOUNTS ARE KEPT AND AGRICULTURAL WORKS.

Khari sluices.

162. There was not sufficient rain in the catchment of the river Khari, but there were two or three small floods in the Hathmati during the year, which helped a great deal in supplementing Khari with Hathmati water. After 15th August 70 to 75 cusecs were let down through the weir at Raipur for the Khari Sluices, but only 25 to 28 cusecs reached Pinglaj and this quantity was found insufficient for the 3,000 to 3,500 acres already transplanted on the Khari Sluices. A conference of District Officers was held on the 27th August at which it was agreed that water should be conserved as far as possible and in order that there should be no waste all water should be diverted at Raipur, and enough let down Section No. 4 of the Khari Canal System, to allow of a discharge of 45 cusecs reaching Pinglaj solely for the benefit of the Kalambandi villages. This rotation was, however, not successful as the people on the Khari Cut Canal were stealthily taking water on the way, which could not be controlled. There were loud complaints from the Kalambandi villages and a conference was convened on the 22nd September 1920 by the Commissioner, Northern Division, at which Officers of the Public Works and Revenue Departments and the District Superintendents of Police of Ahmedabad and Kaira were present, and it was decided to give continuously for 10 days 45 cusecs of water at Pinglaj for Khari Sluices, by way of the Khari Cut Canal, under Police patrol. This arrangement was successfully carried out. On the 6th October the Bokh reservoir was empty and the Hathmati discharge having fallen to 63 cusecs, no water could be given from the Hathmati Canal. Out of the total area transplanted under the Khari Cut, only 30 per cent. could be saved. If this water had been given to the Khari Cut Canal, 70 to 80 per cent. of the area planted thereon would have been saved. However, the assuring of water to the Kalambandi villages (Khari Sluices), which had no other source of supply, saved them from fodder famine and the consequent loss of their cattle. The villages of Goblaj and Bherai fared better with the aid of Goblaj tank and Bherai reservoir.

Muwalia Tank.

163. The rainfall gauged at Muwalia was 17·38 inches against an average of 28·63 inches. The tank did not fill to the F.S.L. and had only 140 M. cft. of water against its capacity of 237 M. cft. The area irrigated was 19 acres in the hot season, 89 in the kharif and 480 in the rabi. The gross assessment of the year amounted to Rs. 2,736 against Rs. 2,007, the average of the last three years. The tank and the canals were maintained in good condition at a cost of Rs. 3,088.

Old Tanks.

164. Improvements to 29 and repairs to 40 small irrigation tanks in the Gujarat Irrigation District and repairs to 14 tanks in the Surat and Broach District were executed, at a total cost of Rs. 10,564 and Rs. 28,963 respectively.

Works in progress.

165. The following important works were in progress or completed during the year:—

(1) The Timba tank at Harsol, Taluka Prantij, Ahmedabad District (nearly completed).

(2) The Matewal tank at Salun and Nanadra villages, taluka Thasra, Kaira District (completed).

(3) The Fudsar tank at Lasundra, taluka Kapadvanj, Kaira District (in progress).

(4) The Dangaria tank at Salod, taluka Kapadvanj (completed).

(5) The tanks at Dangaria and Bodidra Bujraj in Godhra Taluka (in progress.)

166. Most of the small old tanks and bunds in the Ahmedabad, Kaira, and Panch Mahals Collectorates were fairly well filled and the storage was just sufficient for rice cultivation. The total area irrigated during kharif and rabi seasons was 1,138 acres and 230 acres respectively. The total revenue derived from all sources amounted to Rs. 13,303 against Rs. 9,179 in the previous year. The tanks and bunds were maintained in good order.

Drainage Channels.

167. The drainage channels in the Surat and Broach and Gujarat Irrigation Districts were maintained at a cost of Rs. 7,392 and Rs. 7,277 respectively. The work of diversion channel from the Eastern to the Western Drainage Channel near Dholka was practically completed during the year.

Protective Bunds and Reclamation Works.

168. The protective bunds at Wagrej and Bigri in the Bulsar Taluka of the Surat District and those at Lakhigam, Kadodra and Harinagar in the Broach District, which were constructed in the past with the object of preventing tidal water damaging culturable areas, continued to give the good results expected. The Reclamation Bunds near Hansot and Asarsa in the Broach District are gradually assisting in reclaiming a large area of salt land by siltation.

169. Early in June 1920, a heavy cyclonic wave invaded the Gujarat and Kathiawar coasts and damaged several of the bunds in the Surat and Broach District. In some cases the tide water passed over the waste weirs and spoiled some of the land already

reclaimed. The repairs to the bunds were immediately taken in hand and completed. The total cost of maintenance and repairs of the protective and reclamation works in Surat and Broach District during the year amounted to Rs. 10,498.

170. The work of constructing the Protective Bund at Gandhar in Wagra Taluka of the Broach District was continued and has since been practically completed, as local labour became available due to scarcity.

2.—Central Division.

General.

171. Owing to the transfer of the Satara District from the Southern to the Central Division the irrigation works in that district were also transferred to the Central Division with effect from 1st November 1920. Consequently there are in all 15 First Class Irrigation Works in operation in the Division.

(i)—First Class Irrigation Works.

Ekruk Tank.

172. There was sufficient storage available in the Ekruk Tank to meet the full demands of sugarcane and 50 acres of sugarcane were allowed to be grown in connection with the new experimental methods of planting it, under the supervision of the Agricultural Department. As there was very scanty rainfall the field owners who had not entered into six years' leases realized the advantages of the lease system and took to it freely. The area irrigated under this tank was about 6,000 acres with an assessed revenue of about Rs. 1,63,000 against the averages of 4,000 acres and Rs. 1,20,000 respectively.

Jamda Canals.

173. The eight months rabi leases, for the period of 6 years ending 14th June 1922, which were introduced on these canals as an experiment in October 1915, received some impetus from the cultivators during this year of drought. The result was an increase in the area under the rabi leases by 116 acres. The total area secured under leases during 5 years is 707 acres as shown below against the minimum estimated leased area of 1,000 acres :—

Year.	Acres.
1916-17	69
1917-18	193
1918-19	323
1919-20	6
1920-21	116
	707

These figures clearly show that the scheme is not much appreciated by the cultivators under the Jamda Canals, and they resort to it only in years of drought, such periods during the last 5 years being 1918-19 and 1920-21. Unless there is a reservoir to supplement the water of the Girna River at the Jamda Bandhara for these canals, the lease system will not, it is feared, be successful.

174. The total area irrigated by these canals during the year was about 5,700 acres and the gross assessed revenue amounted to Rs. 17,500. The corresponding figures of the average of the previous triennium were 3,000 acres and Rs. 14,200.

Krishna Canal.

175. This canal takes off from the left bank of the Krishna River from a weir at Khodshi near Karad in the Satara District and is 35·25 miles in length. The work of removing silt and raising banks of the Retre Harna distributary and of the Krishna canal in miles 34 and 35 was in progress. An arboricultural nursery was maintained at Shenoli and transplanting operations were carried out. The area irrigated on this canal was about 8,500 acres against an average of 5,700 acres and the gross assessed revenue was Rs. 57,300 which shows a decrease of about Rs. 7,000 from the average of the previous three years.

Revari and Chikhli Canals.

176. The only two works taking off direct from rivers without storage reservoirs are the Revari and Chikhli Canals, in the Satara District. The Revari Canal is about 6 miles in length and takes off from above an ancient bandhara situated on the river Vasna in the Koregaon taluka. The Chikhli is a small irrigation canal, only 6½ miles in length, and has its origin in the weir built in the Nandni River in the Khanapur taluka. The area irrigated by each of these canals during the year was about 400 acres only.

Other works.

177. The remaining works are small and do not call for any special remarks. The area irrigated by these works was nearly 17,000 acres.

178. The area irrigated on the First Class Irrigation works was about 88,000 acres and the gross assessed revenue Rs. 3,57,000, the averages of the previous triennium being 30,600 acres and Rs. 3,09,700, respectively. The increase in area as compared with the last triennium is due to the unfavourable rainfall during the year under report and hence keener demand for canal water. The decrease in gross assessment is due to the irrigation of a smaller area of the high-rated crops. Total area and assessment.

(ii)—WORKS FOR WHICH ONLY REVENUE ACCOUNTS ARE KEPT.

179. The total expenditure on extensions and improvements and maintenance and repairs to the Bandharas, etc., in the Satara, East and West Khandesh Districts was about Rs. 4,300 and the area irrigated thereon was over 1,000 acres.

3—DECCAN IRRIGATION DIVISION.

(i)—FIRST CLASS IRRIGATION WORKS.

(a) *Works in existence.*

Protective Works.

180. One of the oldest and so far the largest irrigation work in the Deccan is the Nira Left Bank Canal, which was completed in 1898-99 at a cost of about Rs. 65 lakhs. This canal takes off from a weir at Vir which is fed by Lake Whiting, a reservoir constructed on the Yelvandi river at Bhatghar in the Bhor State, some 32 miles south of Poona. The existing masonry dam is 127 feet high and about 3,000 feet long and the storage capacity of the lake is 5,300 million cubic feet. An entirely new dam is under construction at Bhatghar just below the old dam to provide a combined supply to the Nira Left Bank Canal and the new Nira Right Bank Canal. The storage capacity will be raised to about 24,000 million cubic feet when the work is completed. The additional supply will be utilised mostly by the new Nira Right Bank Canal which is under construction. The Nira Left Bank Canal is about 100 miles long and irrigates a large portion of the Poona District. Nira Left Bank Canal and Shetphal Tank.

181. The Shetphal tank is comparatively a small tank constructed near the tail of the Nira Left Bank Canal from which it receives its supply during the monsoon for irrigating lands under its command.

182. During the year under report this system irrigated about 74,000 acres, yielding a gross revenue of about Rs. 7,21,000, or a probable net revenue of about Rs. 5,70,000 which works out at about 8 per cent. on the capital invested, as compared with the average of 6 per cent. of the preceding three years. There was a considerable increase in irrigation and revenue over the average and is accounted for, mainly, by a greater demand for canal water due to an unsatisfactory monsoon and an almost entire failure of the cold weather rains.

183. A form of long term water lease that is peculiar to this irrigation system and is being extended to other canals is the so-called "perennial block". It consists of a six-year-agreement between the Irrigation Department and the lessee, under which the former guarantees the supply of water for the irrigation of sugarcane on one-third of the area concerned and for other crops on the remaining area during the monsoon and rabi seasons, and the lessee binds himself to pay a fixed sum per acre in that area, whether water be taken or not. There are at present about 16,000 acres under "perennial block" agreements on the Nira Canal.

184. Another form of long term agreement in vogue on this and other canals is the "eight months' lease", which mainly differs from the "perennial block" in that it concerns irrigation during the monsoon and rabi seasons only. Yet another modified form is adopted on some canals and applies solely to rabi irrigation.

185. The guarantee and, generally, the monopoly of water for the more valuable crops is the attraction of these various long term agreements and the advantage to the department is the stability of irrigation during the important seasons of rabi and hot weather, and also a fixed revenue that can be counted upon.

186. This irrigation work consisting of a tank formed by means of an earthen dam on the Man river, with a storage capacity of about 3,000 million cubic feet, lies in the eastern borders of the Satara District and irrigates lands in the Sholapur District. Though the capacity is considerable, the tank has a poor supply. Mhaswad Tank.

187. The area irrigated during the year was about 12,000 acres, the gross revenue over Rs. 80,000, and the probable net revenue about Rs. 64,000.

188. This is the first of the largest irrigation works of recent construction in the Central Deccan for the protection of areas liable to famine. It was completed in 1915-16 at a cost of a little over one crore of rupees. The system comprises (i) a storage reservoir, Godavari Canals.

called Lake Beate, on the Darna river which is a tributary of the Godavari, (ii) a pick-up-weir at Nandur-Madhmeshwar on the latter river and (iii) two canals, the Godavari Right and Left Bank Canals, taking off from this pick-up-weir.

189. The Darna Dam, inclusive of the waste weir, is a little over a mile long and has a maximum height of 92 feet and a capacity of nearly 9,000 million cubic feet.

190. The Godavari Right Bank Canal, which is the more important of the two canals, is 70 miles long and serves the northern tracts of the Ahmednagar District. The Left Bank Canal is 48 miles long and irrigates lands in the south of the Nasik District and north of the Ahmednagar District.

191. The development of irrigation on these canals is progressing up to expectations. As in the case of some other canals, considerable trouble is caused by the enormous growth of weeds which greatly check the flow of water, and steps are being taken for remedying this evil.

192. Sugarcane cultivation is steadily advancing on these new canals. The total area of this crop irrigated during the year was about 6,500 acres, whereas in the preceding year it was less than 4,000 acres. The *Gul* industry was new to the locality, but the ingress of expert growers from Poona District, where sugarcane cultivation has been long in existence on the Nira Left Bank Canal and Mutha Canals, has made it possible to establish the industry on the Godavari Canals. The Sugar Corporation of India is arranging to start a large up-to-date sugar factory.

193. The total area irrigated in the year by the two Godavari Canals was over 51,000 acres, resulting in a gross revenue of nearly 6 lakhs of rupees, or a probable net revenue of about 4 lakhs of rupees which gives a return of about 4 per cent. on the capital cost. There was an increase in the area irrigated and in the revenue, compared with the average of the past three years, and is due, partly, to the extension of sugarcane cultivation and, partly, to the increased demand for water during the rabi season, owing to the unfavourable character of the monsoon.

PRODUCTIVE WORKS.

Mutha Canals and Matoba Tank.

194. This irrigation system was completed in 1896-97, the capital cost being about 65 lakhs of rupees. There are two canals, the Right and Left Bank Mutha Canals, of which the former is 70 miles and the latter 18 miles long. Both the canals take off from Lake Fife, a storage reservoir of a capacity of about 4,000 million c. ft. formed by a masonry dam, about 3,400 feet long with a maximum height of 107 feet, on the Mutha river, at Khadakwasla, about 10 miles south-west of Poona.

195. The Mutha Canals play a very important part in the welfare of the City of Poona and the surrounding country; they furnish the Cantonment and the City with their supply of water and have, besides irrigating ordinary crops, greatly promoted the cultivation of fruits, vegetables, lucerne and sugarcane within easy reach of this large city and an important military centre. The average cultivation includes about 5,000 acres of sugarcane, 1,600 acres of fruits and vegetables and about the same area of fodder crops. A small sugar factory is working at Phursangi.

196. This system irrigated about 19,000 acres during the year and earned a gross revenue of nearly 3½ lakhs of rupees, inclusive of sales of water to the cantonment and the city; the probable net revenue will come to about 1¾ lakhs of rupees giving a return of about 2½ per cent. on the capital invested, as compared with the average of about 3·71 per cent. for the preceding three years. There was a very small increase in the area irrigated, but there is a considerable decrease in the revenue due to restriction of sugarcane cultivation in view of the shortage of supply.

197. The Matoba Tank, a small irrigation work, receives its main supply from the Mutha Right Bank Canal, and is therefore incorporated in the system.

Kadwa River Works.

198. The Waghad Tank, with an earthen dam having a maximum height of 96 feet, is the main feature of this small scheme, and it feeds the Pakhed, Ojhar-Tambat and Wadali Canals.

199. There was a keen demand for canal water during both kharif and rabi seasons on account of the local failure of the monsoon and the area irrigated was over 5,000 acres showing an increase of about 1,000 acres on the preceding three years.

(*b*) WORKS UNDER CONSTRUCTION.

Protective Works.

Pravara River Works.

200. This system, which is still under construction, comprises (*i*) a storage reservoir called Lake Arthur Hill on the Pravara River at Bhandardara (near the foot of Mount Kalsubai) 29 miles by road from Igatpuri, (*ii*) a pick-up-weir at Ojhar, 50 miles down the river and (*iii*) two canals taking off from the weir, one on each bank of the river, named the Pravara Right and Left Bank canals, 33 miles and 48 miles long respectively.

201. The masonry dam will be 270 feet high and about 1,600 feet long. It was started in 1911 and has now reached a maximum height of well over 200 feet. When fully completed the storage will amount to approximately 18,000 million cubic feet and will irrigate some of the lands most affected by famine in the Ahmednagar Collectorate, the culturable area under command being 162,976 acres of which 75,000 acres are expected to be irrigated annually.

202. Some water from storage is already available for irrigation and proved of great value in saving crops during the recent famine. A large sugar factory owned by the Belapur Company has started operations near Belapur Railway station. This concern will eventually bring about 2,000 acres under sugarcane every year out of about 6,000 acres which the Company have acquired.

203. Owing to shortage of funds at the beginning of the working season, the progress of the work suffered severely and only 9¼ lakhs of cubic feet of masonry have been added to the dam during the year instead of the anticipated 14 lakhs, but nevertheless it was possible to give employment to over 2,000 people who would otherwise have been employed on famine relief works.

204. The progress of work on the canals is also well advanced and it is anticipated that the whole scheme will be completed in 1923, and as work progresses irrigation is being extended.

205. The estimated cost of the scheme was Rs. 1,27,04,607 but this will be increased by about 20 per cent. due to the rise in prices. A revised estimate was under preparation. The expenditure on "Works" alone during the year was about 8½ lakhs of rupees and the total amount spent up to date is about 81 lakhs of rupees.

206. Investigations are afoot for providing a balancing tank of a sufficient capacity as near the canal head-works as possible, as the basin at the Ojhar pick-up-weir is too small to meet requirements. The possibility of developing hydro-electric power, both at the foot of the dam at Bhandardara and at a point a little down the river where a natural fall of about 200 feet exists, is also receiving attention; a total of 5,000 E. H. P. seems by no means impossible with suitable arrangements.

207. The total area irrigated during the year was over 26,000 acres as against 17,000 acres in the preceding year, and the gross revenue was over Rs. 80,000; the probable net revenue will be about Rs. 26,000.

Girna River Works.

208. This is comparatively a small irrigation system in the Nasik Collectorate, comprising a storage called the Chankapur Tank and the Girna Left Bank Canal which will be about 19 miles long when its extension is completed. The total culturable area commanded by the canal is 25,300 acres. The Chankapur tank lies on the Girna River, a tributary of the Tapti river and its dam of masonry has a maximum height of 140 feet; the storage also supplies some water to the Jamda Canals in the East Khandesh Collectorate, about 80 miles away, as well as to a few small irrigation works *en route*.

209. The area irrigated during the year was over 5,000 acres and the gross assessed revenue was nearly Rs. 25,000 and the probable net revenue will be about Rs 3,000.

New Masonry Dam at Bhatghar and Nira Right Bank Canal.

210. This irrigation work will, when completed, be the largest in the Deccan and though the canal will depend for its supply upon a storage at Bhatghar, about 32 miles from Poona, and will pass through the northern tracts of Satara Collectorate and Phaltan State, it will mainly benefit the western portion of the Sholapur Collectorate which is very liable to famine.

211. The project comprises the construction of a larger dam at Bhatghar to replace the existing dam, as stated in the paragraph regarding the Nira Left Bank Canal, so as to increase the storage from about 5,800 to about 24,000 million cubic feet, with a view to provide a supply to both the old Left Bank Canal and the new Right Bank Canal. The latter starts like the former from the head-works at Vir, some 20 miles below the Bhatgar storage and will end near Mohod in the Sholapur Collectorate, the total length being about 110 miles.

212. The works were started in 1912 and, though they passed through various vicissitudes consequent on the war, the improvement made in the progress of the construction since the preceding year makes it possible to hope to commence irrigation in the year 1924. Work on the dam had to be curtailed owing to funds not being readily available; nevertheless about 20 lakhs of cubic feet of masonry were added to the dam bringing the total up to the end of the year to about 97 lakhs and leaving a balance of 118 lakhs. If there be no further set-back it is expected to complete the dam in the year 1926.

213. The previously estimated cost of the project, as sanctioned by the Secretary of State in 1912, amounts to Rs. 2,57,72,499, but, due to the insufficiency of the amount chiefly owing to the conditions arising out of the war, a revised estimate amounting to Rs. 4,91,10,880 has recently been submitted. An amplification of the scheme with a view to develop the irrigation of the lands in the Nira valley (some 5 to 6 lakhs of acres) to the utmost extent possible is also under preparation.

214. The total expenditure incurred on "works" during the year amounted to nearly Rs. 18 lakhs, bringing the total outlay on "works" up to date to about Rs. 152 lakhs.

215. The storage at Bhatghar provides a sufficient head and discharge to produce electrical energy of over 3,000 Horse Power at the foot of the dam. Part of this energy is already being utilized for driving all machinery used for construction such as mortar mills, stone crushers, work-shop plant, etc., and for lighting and other purposes, the installation consisting of 4 units of 256 K.W. each, the voltage being 2,000.

(ii) Works for which only revenue accounts are kept.

216. These include numerous old *bandharas* or weirs built across small streams to raise the level of the water sufficiently high to enable it to command the lands to be irrigated. In all there are about 300 of these small works in the Nasik Collectorate alone, and there is also a large number in West Khandesh. The outlay on repairs and improvements amounted to about Rs. 28,000 during the year.

4—SOUTHERN DIVISION.

General Remarks.

217. During the year, the Satara District which was under the control of the Superintending Engineer, Southern Division, was transferred to the control of the Superintending Engineer, Central Division, with effect from 1st November 1920 and consequently information regarding the Krishna canal, Revari Canal, Upper Man River Works, Yerla River Irrigation Works, Chikhli canal and Maini tank has been given in the Report of the Central Division.

218. The tanks in the Belgaum, Sampgaon and Khanapur talukas of the Belgaum District for which only revenue accounts are kept were transferred to the Dharwar Irrigation District; Gaddikeri tank at Mugutkhan Hubli, a first class tank, which was hitherto under the control of the Executive Engineer, Belgaum District, was also transferred to the Dharwar Irrigation District.

(i) First Class Irrigation Works.

219. The area irrigated and the gross assessed revenue on the first class irrigation works remaining in charge of the Superintending Engineer, Southern Division, during the year were about 22,000 acres and Rs. 97,000 respectively which show an increase of 26 per cent. and 42 per cent. respectively when compared with the average of the previous three years. This is due to a keen demand for water for monsoon and rabi crops especially under the Gokak Canal in consequence of the scarcity of rainfall.

Gokak Canal

220. The Gokak Canal is the most important work in this Division. This irrigation system consists of a reservoir formed by a masonry weir across the Ghataprabha river at Dhupdal in the Belgaum District and a short length of canal taking off this reservoir.

221. The level of the water in the Dhupdal reservoir on 1st April 1920, was 18·28 feet and it fell steadily to 10·75 feet above the sill of the sluices on 2nd June 1920 when rain began to cause a steady replenishment and the tank overflowed on 22nd June 1920. The highest flood of the year occurred on 9th July 1920, when the water reached a level of 2 feet above the permanent crest of the weir which is at R.L. 2008·06.

222. The weir crest (2,985 feet in length) was as usual temporarily raised by two feet at a cost of Rs. 1,497 and the additional storage of 256 million c.ft. of water thus obtained was most useful for the irrigation of rabi crops and for meeting the demand of the Mills at Gokak.

223. The rainfall of the year was much below the average and being unfavourable, especially in the rabi season, there was a heavy demand for water then. This scanty rainfall also caused great distress in some parts of the Belgaum District, but the tract served by the Gokak Canal was not very much affected. The canal was run full till 7th December 1920, and then, owing to low level in the reservoir, a smaller discharge was allowed to pass through the canal till 18th January 1921 when it was entirely closed. Later on, when it was noticed that much of the rabi would be seriously damaged unless one more watering was given, the canal was reopened for a week. This supply of water proved exceptionally valuable and was most gratefully used by the cultivators. Thus it was not only that the crops were saved, but the area irrigated during that season was the highest on record.

224. The agreement with the Mills at Gokak is that they are to be supplied with water for six days a week at the rate of 146 cusecs for 13 hours a day, and for that they pay Rs. 14,313 per year. In the year under report, owing to the low water level in the reservoir, the Mills took only one quarter of the usual supply in the periods 28th April 1920 to 1st May 1920 and 7th May 1920 to 5th June 1920. The Mills, however, were never obliged to stop work in consequence of shortage of water.

Dharma Canal.

225. This canal was open from 14th June to 21st October 1920 and it had a good steady supply of water. The crops irrigated by the canal and by the tanks depending on it were of good class.

Other Tanks.

226. The remaining works are all small tanks mostly in the Dharwar District irrigating from 50 to 600 acres.

(ii) Works for which only revenue accounts are kept.

227. Most of these works are in the Dharwar District and for the most part they supplement rainfall and irrigate rice during the periods when rain is holding off. During the year 53 tanks were repaired at a total cost of Rs. 46,000 the average expenditure on such repairs during the previous triennium being Rs. 44,000.

228. The total area irrigated by these small tanks was about 95,000 acres and the irrigation share of the consolidated assessment amounted to about Rs. 8 lakhs.

5.—SCIENTIFIC WORKS.

(a)—Engineering questions that have arisen.

229. Observations to ascertain losses by evaporation and absorption were made by means of iron tanks placed in certain tanks and reservoirs and the results are published in the "Annual Report of supplies of water available for irrigation works, etc." for 1920.

(b)—Special Irrigation District.

230. This charge deals with scientific investigations in connection with various problems related to irrigation from the Deccan Canals. The investigations are conducted on canals, in laboratories, experimental farms and private fields. The main problem has been to reclaim lands rendered unfit for cultivation due to water-logging and salt-efflorescence, and to prevent the occurrence of these evils, especially in areas where sugarcane is grown. The results achieved in this direction are very satisfactory and it seems now to be proved beyond doubt that the worst affected lands can be completely regenerated at a comparatively small cost by means of a well considered system of permanent drains, combined in the first few years, with the restoration of the physical texture of the soil with the aid of surface washing or leaching of the salts, suitable initial plantations, green manuring, admixture of coarse vegetable matter, etc.

231. The preventive measures against deterioration of land will be based on lessons learnt from reclamation work. As the nature of the subsoil decides whether any artificial drainage is required or not and how it is to be carried out, extensive subsoil surveys are in progress.

232. The field of operations, which also includes observations of levels of water in wells, covers the areas commanded by the several open canals as well as by those under development or construction; several drainage schemes have already been prepared. The possibility of utilizing the drainage water for irrigation purposes as far as its salt contents will permit is also under inquiry.

233. Another interesting investigation being conducted by the Special Irrigation District is with regard to the value of sewage effluent as a manure for various crops. For this purpose the effluent from the Poona City Septic tanks is conveyed through pipes to a farm where it is diluted with canal water and distributed both to experimental fields and to private lands. It is satisfactory to be able to record that, so far, the effluent has, when properly applied, proved a successful form of manure which the people greatly appreciate. It is observed that no deterioration in the physical condition of the soil is caused and that the growth and outturn of crops is in no way inferior to that obtained by other methods of manuring. The effluent farm has now grown from 31 to 64 acres, and some 400 acres of private land also came under effluent treatment.

234. A minor matter to be recorded, but one with great possibilities on the Deccan Canals, is the establishment of a turbine of 6 H.P. on a fall of 10 feet in a distributary running through the effluent farm. With the aid of this power all the cane grown on the farm and some grown on private lands was crushed; the lesson learnt is being made use of in providing such small falls wherever possible on the Nira Right Bank Canal system with a view to their utilization for driving agricultural machinery.

(c) River Gauging.

235. Several of the rivers in the Presidency proper, the waters of which give any promise of the possibility of the utilization thereof for irrigation purposes, are being gauged, and the discharges measured. Experiments to ascertain the quantity of silt contained in the waters of some of the rivers were also made during the year. The results of all these observations and experiments are published in the "Annual Report of Supplies of water available for Irrigation Works, etc." for 1920.

Several rain gauges were also maintained as usual by the Executive Engineers concerned.

ascertain percentages fixed by Government, but which are not adjusted in the Finance Accounts.

The amount represents cost of stores received from England the payment of which was erroneously a debited under "45, Irrigation Capital Expenditure" instead of under Works" during the year 1920-21.

J. STUART MILNE,
Accountant General.

(a) The cultivable and irrigable areas commanded as given in the Pravara River Works project are 1,83,976 and 75,000 acres respectively these include the old areas (cultivable and irrigable) under Lakh Canal, viz., 25,536 and 22,760 acres respectively. The balance is distributed between the two Pravara canals in proportion to the gross command.

(b) These figures are for the whole Project.

(c) These figures do not include the amount for widening the Nira Left Bank Canal.

(d) Estimated rainfall in the catchment.

(e) As actually completed.

(f) Includes the Girna Left Bank Canal extension as irrigation has begun on the extension.

N. B.—As Irrigation has begun on the extended Pravara Left Bank Canal figure shown in the statement are for the new canal. The figures for the Old Pravara Left Bank Canal are not shown.

* Estimated rainfall in the catchment.
† The catchment area of the drainage channel is 13 square miles in addition.
‡ As provisional F. S. L. R. L. 163·00.
§ As original F. S. L. R. L. 159·00.
(a) Figures given in Statement I-A.
(b) The tank supplies the Girna Left Bank Canal and bandharas there below.
(c) Figures are given in Statement I-A. under Godvari Canals.
(d) Above lowest foundations.
(e) Above lowest point in river bed.
(f) This area is also commanded by Kirn Left Bank Canal.
(g) Includes 304 miles of French Canal.
(h) The tank supplies the Pálkhad, Ojhar Támbat, and Waddli Canals and their distributaries as noted in Statement I-A.
(i) Storage available after deducting 509 m. cft. which cannot be used on account of the Poona water-supply.
(j) Includes 7,182 acres commanded by Matoba Tank.
(k) After deducting silt deposits.

II.A.

I-E.

Bombay Presidency, excluding Sind, during the year 1920-1921.

Area irrigated per Cubic Foot per Second.				Base to which the Duties on Water are calculated.		Remarks.
Discharged at Head.		Utilized.				
Kharif.	Rabi.	Kharif.	Rabi.	Kharif.	Rabi.	
14	15	16	17	18	19	20
127	154	157	172	16th February to 15th October.	16th October to 15th February.	*Note by the Superintending Engineer, Deccan Irrigation Division.*—The antique figures in brackets represent areas actually irrigated during the respective seasons and the duties have been calculated on these figures. They differ from those in Statement IV-E owing to the fact that certain areas irrigated during the rabi season are assessed in kharif papers and *vice versa*. In the rabi season in addition to pure rabi crops perennial and eight months crops are irrigated. To obtain correct duties, therefore, these crops have to be added to the rabi area.

...	...	...	...	Do. ...	Do.	
96	119	96	119	Do. ...	Do.	§ An area of 28 acres is indirectly irrigated by underground percolation from the Mutha Right Bank Canal.
...†	74	...†	74	Do. ...	Do.	*Note by the Superintending Engineer, Central Division.*—(1) As perennial and eight months crops are irrigated during the rabi season, in order to obtain the figures of duty for the rabi season in columns 15 and 17 the areas of perennial and 8 months' crops given in statement G irrigated in the rabi season are added to areas of rabi in column 4 and the total so obtained is divided by figures of rabi discharges in columns 11 and 13. The figures in columns 16 and 17 thus represent areas actually irrigated per cusec.

(3) Leakage or percolation rates are the same as ordinary rates.
(4) Water rate for non-irrigational purposes should not be less than Re. 1 per 10,000 cubic feet, *vide* Government Resolutions No. A. I.—879, dated 25th January 1912, and No. A.I.—7004, dated 31st July 1916.
(5) Re. 1 per acre to be charged for single watering given to those who are not regular irrigators or holders of rabi leases, *vide* Government Resolution No. A.I.—1789, dated 6th July 1906, and Government Order No. A.I.—2485, dated 3rd March 1916.

§ For Sugarcane and Pán gardens double the ordinary rates are charged.

(a) No percentage is calculated, as the net revenue against the work is a minus figure.
(b) Works under construction.
(c) The amount of Rs. 5 on account of refunds of revenue is deducted from gross revenue Rs. 33,913 and net revenue shown here.

S. A. VANESHWAR,
Assistant Accountant General.
